

Environmental, Health & Safety (EH&S) Compliance Systems Services

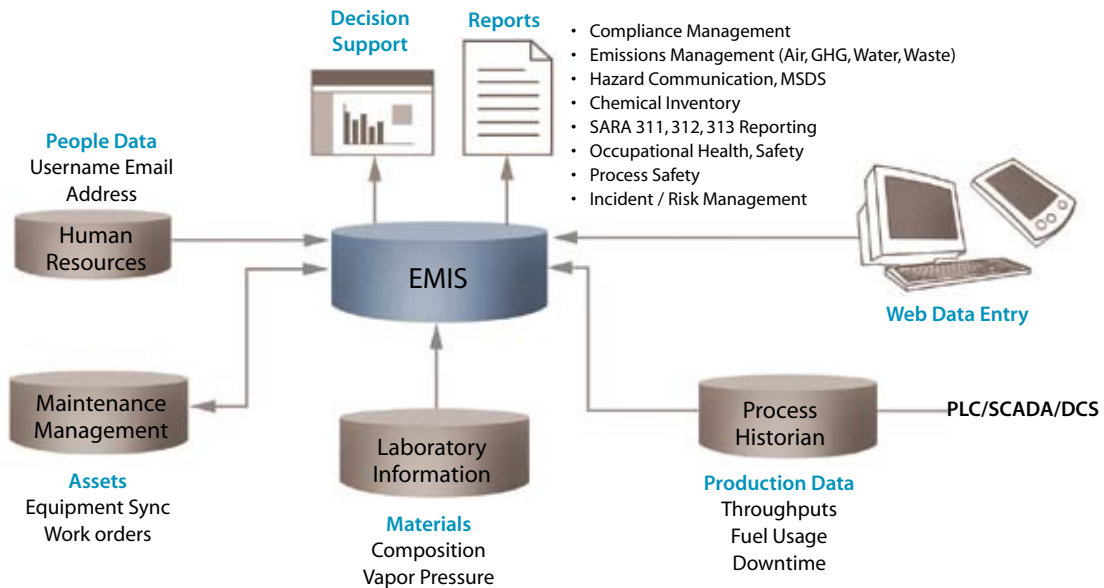

The need for standardized, enterprise-wide systems and processes to address EH&S compliance has never been higher. To meet the challenge, many companies are looking to new technology solutions with a focus on transparent communication of EH&S performance and reduced costs of compliance.

The benefits of using such an EH&S management information system (EMIS) are substantial.

- Reduced risk
- Improved compliance assurance
- Streamlined, standardized EH&S work processes
- Reduced cost of EH&S compliance
- Improved executive decision support
- Enhanced brand image and improved reputation

Companies that have successfully introduced technology to increase EH&S performance have followed a consistent software deployment methodology that includes requirements analysis and definition, business-case development, system selection, implementation and integration. The final step, maintenance and sustainability, is critical for the systems to continually provide maximum value to EH&S operations.

Optimized Systems and Solutions (OSyS) has established itself as a leader in providing the services that accomplish each of these steps most efficiently and cost-effectively. With one of the largest, most experienced teams of EMIS specialists in the market, OSyS is the best choice to provide assistance across the entire EMIS life cycle. That level of expertise allows you to successfully deploy the right enterprise EH&S system, integrate it with your current business and operational systems, and obtain a comprehensive view of your company's compliance and risk profile.

Environmental, Health & Safety (EH&S) Compliance Systems Services

OSyS has implemented EMIS deployments for Fortune 500 companies in the oil and gas, power generation, aviation and chemicals markets.

Advanced EMIS Software Selection and Implementation

With a large team of certified implementers, OSyS has unsurpassed experience in deploying off-the-shelf EMIS applications, covering customization, report building, integration, and support. Our experience and time in the marketplace has allowed us to continually refine and optimize our streamlined implementation methods, data-loading templates, and training content. We couple that with knowledge gained from extensive interaction with leading EMIS and EH&S performance software vendors to provide our customers the best solutions for their needs.

In-depth Information Technology Expertise

Our extensive experience enables OSyS to understand each customer's information technology issues and implement the needed solution using the very latest methods and platforms. Our expertise is broad and deep, encompassing web portals and integration with data historians, laboratory information management systems, maintenance systems, continuous emissions monitors and business software.

OSyS EHS Capabilities

Business Process Improvement

- Workflow analysis
- EH&S process optimization
- Systems integration

Performance Improvement

- Leading and lagging indicators
- Solution development

Deployment and Sustainability

- Change management
- Training
- Full life-cycle support

When implemented correctly, EMIS will not only streamline compliance, but will drive EH&S vision, organizational change, and common work practices throughout your company.

OSyS provides experience and expertise to ensure the successful integration and implementation of the right solution for you.
