

OSyS establishes presence in Qatar

Optimized Systems and Solutions (OSyS) is creating an optimization center (OC) in the Qatar Science and Technology Park (QSTP) as the first step in establishing a research, training and development program in support of Qatar's mission to create a hub for technology development, education and research in the region. Rolls-Royce recently signed a tenancy agreement with the QSTP, providing a focal point for activities to develop intellectual capital. Working closely with local industry and academics, OSyS will lead this effort.

The first of its kind to be deployed in a technology park, the OC will be home to initiatives enabling commercial airlines to enhance operational and environmental performance while reducing costs. It will use OSyS' world-class analytical techniques and processes to focus on solutions in environmental management, carbon reduction, equipment health management, performance management, fleet optimization and risk management, among others.

OSyS is a wholly-owned subsidiary of Rolls-Royce Group plc. To read the Rolls-Royce press release on the QSTP tenancy, [click here](#).
